

TEJA MUPPANASETTI

Python Backend Developer | 6 months Experienced | 9491170420 | [🔗](#) | tejamuppanasetti@gmail.com | [Linkedin](#)

Experience

Backend Developer – Ozrit Ai Solutions

Internship | September 2025 – February 2026

- Designing RESTful APIs with secure JWT authentication, role-based permissions, and optimized database queries.
- Managing cloud infrastructure and CI/CD pipelines on AWS (EC2, S3, CloudFront) for smooth and reliable deployments.
- Integrating third-party services, AI modules, and real-time communication features across platforms.
- Conducting code reviews, mentoring developers, and ensuring backend performance, scalability, and best practices.

Web Developer – Zidio Development

Internship | April 2025 – June 2025

- Developed and maintained production-level web applications and APIs using HTML, CSS & JAVASCRIPT .
- Built scalable backend systems for client-facing platforms including booking systems and support dashboards.
- Implemented authentication, JWT-based access control, and role-based permissions.

Skills

- **Programming Languages:** Python, C, Java
- **Core Concepts:** Data Structures & Algorithms, Problem Solving
- **Back-End Development:** Django (REST Framework), API Development (CRUD, Filtering, Pagination, JWT Authentication), ORM Optimization
- **API Tools:** Postman (API Testing & Documentation)
- **Development Tools:** Git, GitHub, Visual Studio Code, Ubuntu (Terminal, Bash, Package Managers), Docker (Containers, Dockerfile, Docker Compose)
- **Front-End Technologies:** HTML, CSS, JavaScript.

Projects

EV Rental & Booking Management Backend

Technology: Backend Development, Cloud Computing

Tools: Django REST Framework, Cashfree Payments, Celery, Amazon S3, FCM Notifications

Description:

Developed the backend system for Ridev.in, an online EV rental platform that allows users to browse and book electric vehicles. The backend provides secure REST APIs using Django REST Framework for vehicle listing, authentication, bookings, and payment workflows. Cashfree Payments was integrated to manage rental payments, security deposits, subscription renewals, and booking extensions. EV images and user documents are securely stored in Amazon S3 with IAM-based access control. Celery background tasks and FCM notifications automate subscription checks, charging log updates, and real-time alerts. Overall, the solution delivers a scalable and reliable backend that streamlines the entire EV rental lifecycle from booking to ride completion.

Vibemart – Referral & Commission-Based Mobile Application Backend

Technology: Backend Development, Cloud Computing

Tools: Python, Django, Django REST Framework, MySQL, Amazon S3

Description:

Developed the backend for Vibemart, a Play Store referral-based mobile application focused on product sales and commission earnings. Built secure REST APIs using Django REST Framework for user registration, referral tracking, coupon validation, wallet management, and commission calculations. Implemented multi-level referral logic to handle hierarchical earnings and reward distribution. Supported a primary in-app product along with external product redirections via browser. Developed backend workflows for referral commissions, transaction history, recharge services, and loan-related features. Optimized MySQL database schemas using Django ORM to efficiently manage referral trees, financial records, and user transactions, ensuring scalability, secure authentication, and smooth mobile frontend integration.

Graduation

- Bhashyam Public School — 10th
- Sri Aditya Junior College — Intermediate
- Godavari Institute of Engineering and Technology — B. Tech (2024)

Declaration

I hereby declare that all the information provided above is accurate and true to the best of my knowledge. I am committed to contributing effectively and to the best of my ability if given the opportunity to join your esteemed organization.
